STREAMFLOW STATION INDEX

SAUGEEN RIVER BASIN

Saugeen River at Durham	1
Camp Creek at Allen Park	2
Little Mill Creek near North Bruce	4

MAITLAND RIVER BASIN

Maitland River Tributary near Fordwich	5
--	---

AUSABLE RIVER BASIN

Little Ausable River near Centralia	7
-------------------------------------	---

GRAND RIVER BASIN

Eramosa River at Victoria Road, Guelph	8
Speed River at Woodlawn Road, Guelph	10
North West Drain near the Guelph STP	11
Aberfoyle Creek at Aberfoyle	13
Aberfoyle Creek Tributary near Aberfoyle	14
Aberfoyle Creek below Aberfoyle	16
Speed River near Glen Christie	17
Cedar Creek above Hyw 401	19
Cedar Creek below Hyw 401	20
Schneider Creek at Kitchener	22
Montgomery Creek at Kitchener	23

THAMES RIVER BASIN

Middle Thames River Tributary near Embro	24
Big Creek near Strangfield	25

HILLMAN CREEK BASIN

Hillman Creek near Leamington	27
-------------------------------	----

TWENTY MILE CREEK BASIN

North Creek near Smithville	28
-----------------------------	----

HUMBER RIVER BASIN

Salt Creek at Castlemore	30
--------------------------	----

WILTON CREEK BASIN

Wilton Creek at Storms Corners	31
--------------------------------	----

INTRODUCTION

As a result of the Great Lakes Water Quality Agreement of April 15, 1972, the International Joint Commission (IJC) established the Pollution From Land Use Activities Reference Group (PLUARG). The Water Resources Branch of the Ministry of the Environment herein presents the results of streamflow measurements that were made in support of this Agreement, during the period 1975 to 1977.

Two pilot watersheds, the Grand River and Saugeen River basins, were chosen for intensive studies in Canada, to cover a wide variety of potential sources of pollution to the Great Lakes. The selection criteria for the pilot watersheds included climate, geology, soil characteristics, land uses and other information already available from completed or ongoing studies. Land uses and practices not adequately represented in the pilot watersheds were incorporated into the study by including additional subwatersheds in different parts of the Great Lakes basin. (Figure 1 in rear pocket)

Continuous recording streamflow gauges were installed at each site included in this publication. Staff of the Hydrology and Monitoring Section of the Water Resources Branch were responsible for instrumentation, collection and computation of these streamflow data.

Enquiries concerning the details of individual stations and related records should be made to:

Supervisor, Hydrology & Monitoring Section

DEFINITION OF TERMS AND ABBREVIATIONS

Terms

"Acre-foot" is the volume of water required to cover an acre of one acre to a depth of one foot. It is equal to 43,560 cubic feet.

"Control" is the condition or structure downstream from a gauging station that determines the stage-discharge relationship. In the absence of an artificial structure, a control is generally produced by the natural streambed.

"Cubic foot per second" is a unit expressing the rate of discharge. One cfs is equal to one cubic foot of water flowing past a particular point in one second. This is the basic unit of flow in general use, all other units being computed from it by using factors given under the "Equivalents of Measurement".

"Stage-discharge relationship" is the relation at a gauging station on a stream between the water level and the discharge at that gauging station.

Abbreviations

AC-FT	acre-foot
CFS	cubic foot per second
CONC	concession
HWY	highway
TWP	township

Equivalents of measurement

1 cubic foot per second = 0.28317 cubic metre per second
1 cubic foot = 6.2321 Imperial gallons
1 cubic foot per second for one day = 1.9835 acre-feet
1 statute mile = 1.6093 kilometres
1 square mile = 2.590 square kilometres
1 acre = 0.40469 hectares
1 acre-foot = 1.233.5 cubic metres
